Homes

The First Step Towards Green Construction

GPRO: *Homes* prepares builders to meet the growing demand for comfortable, healthy and efficient homes. This class prepares general contractors to differentiate themselves in the marketplace by building sustainable homes.

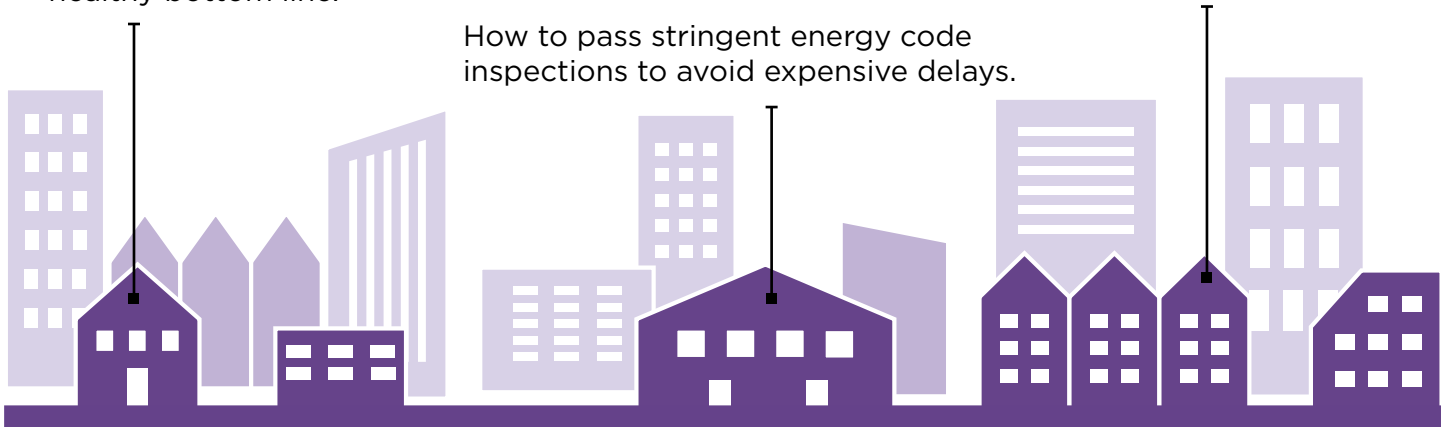

This affordable entry-level course is ideal for a range of building professionals including contractors, subcontractors, estimators, and key construction management staff in general contracting companies specializing in 1-4 family, low-rise homes.

What will you learn?

Sustainable construction management practices to secure a healthy bottom line.

The 5 simple strategies that will increase the energy efficiency of your projects.

How to pass stringent energy code inspections to avoid expensive delays.

Course outline
